PRESS RELEASE – IMMEDIATE RELEASE

Handshakes Expands Regional Intelligence with New Thailand Dataset to Deepen Cross-border Insights for Enhanced Screening

SINGAPORE, 12 Nov 2025 – Handshakes, a leading provider of corporate intelligence and regulatory technology solutions, today announces the successful onboarding of its latest dataset, Thailand company registry data, supporting use cases in market expansion, business development, investment analysis, industry benchmarking and due diligence.

The new dataset unlocks deep visibility into Thailand's corporate ecosystem, allowing users to access reliable, official business information and map intricate business relationships across the region. With this expansion, Handshakes users can now perform seamless cross-border research and analytics, enhancing their ability to enter new markets, evaluate opportunities and mitigate risks with confidence.

"*Thailand represents a key piece of the Southeast Asian economy,*" said Ivan Seah, Chief Commercial Officer at Handshakes. "*By adding this dataset, we're giving our users unmatched visibility into a vital market, accelerating strategic decisions across borders*."

To further increase accessibility for users to perform seamless checks, the Thailand dataset has now been successfully integrated into the Handshakes APP — empowering users to detect cross-border ownerships, uncover hidden networks across national borders, and perform advanced regulatory screening and conflicts-of-interest checks directly within Handshakes' proprietary reports and maps. This interconnected view reveals previously undetected risks and relationships, equipping compliance teams and regulators with the necessary tools to mitigate anti-money-laundering (AML) risks in an increasingly complex regional landscape.

This addition further enhances Handshakes' regional coverage, which already includes company registry data from Singapore, Malaysia, Vietnam, and China — alongside Singapore litigation data and the S&P Global Market Intelligence Business Relationships dataset. Together, these sources provide a comprehensive view of corporate networks across Asia, enabling deeper insights into ownership structures, affiliations, and potential risks.

Handshakes will be showcasing this new dataset and other capabilities at the Singapore Fintech Festival 2025, taking place from 12 to 14 November at the Singapore EXPO. Attendees can visit Hall 4, Booth 4G32 to experience live demos of the Handshakes APP and explore how the Thailand dataset enhances cross-border business intelligence.
