For Immediate Release

Keypasco “One Touch Safe,” a Revolutionary Digital Fraud Solution, launches at the Singapore FinTech Festival 2025 (Booth 4F32)

Singapore, October 2025. Digital fraud as well as cybercrime targeting online banking and e-commerce are surging globally. Even highly protected markets such as Sweden, which has deployed a nationwide BankID for decades, reported in March 2024 that “fraud is the fastest growing type of crime, “according to the Central Bank (Sveriges Riksbank).

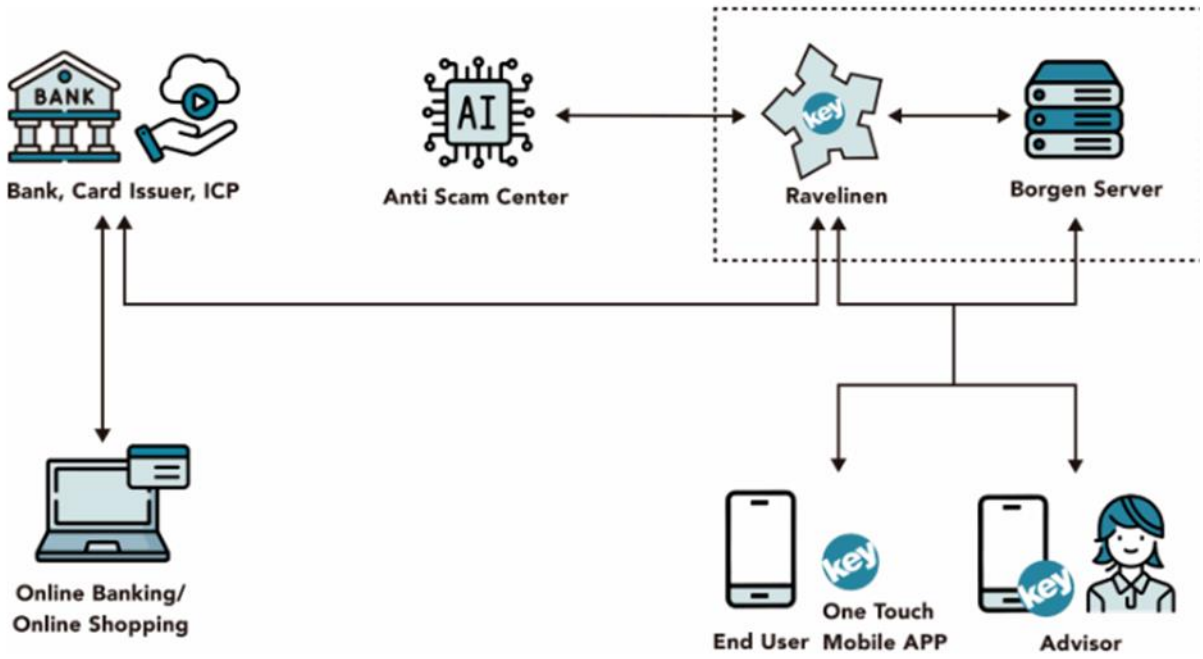
Japan’s Osaka Prefecture responded to escalating social engineering scams by banning seniors from phone use at ATMs—a dramatic step in March 2025. With nearly every service now online, fraudsters exploit digital convenience to attack around the clock, anywhere in the world.

The core vulnerability remains: cards and bank accounts are unlocked by default, making them easy prey for unauthorized access and deception.

Keypasco “One Touch Safe”—is a pioneering solution that locks cards and accounts by default, empowering users to control access and prevent fraud.

Key Features:

- Enhanced Security: Accounts can only be accessed when unlocked by the user, creating an additional layer of protection against fraudsters.
- User Control: Instantly unlock accounts with a few taps, choosing precisely when and how access is granted.
- Advanced Protection:"Sign What You See" verification and optional family member approvals for high-risk transactions add critical safeguards against scams and social engineering.



With One Touch Safe, Keypasco redefines digital authentication, delivering robust protection, transparency, and confidence for financial institutions and consumers.

See "One Touch Safe" in action at the Singapore FinTech Festival 2025—visit Keypasco at Booth 4F32 to experience this breakthrough innovation firsthand.

About Keypasco

Founded in Taiwan, Keypasco delivers cutting-edge authentication and digital identity solutions for secure online access. Its patented technology provides strong protection, seamless user experience, and privacy assurance for banks,

fintech companies, e-commerce, and digital service providers globally.
