Wultra Opens Singapore Office to Serve Growing Demand for Post-Quantum Authentication

Singapore, 11/11/2025 — Cybersecurity leader Wultra, specializing in post-quantum authentication (PQA) for banks and fintechs, is opening a new office in Singapore—its first branch in Asia. The expansion strengthens Wultra's commitment to supporting regional demand for quantum-resistant security and helping financial institutions prepare for emerging cyber threats of the post-quantum era.

"Southeast Asia is becoming one of our key markets. The region's financial sector is evolving rapidly, with post-quantum authentication increasingly becoming a top priority. Establishing a local presence enables us to provide better support to our clients and assist more institutions in strengthening their defenses for a quantum-ready future. The timing aligns with our participation in the ***Singapore FinTech Festival 2025****, where we welcome the opportunity to connect."* said **Peter Dvorak, CEO of Wultra**.

Over 70 banks and financial institutions across 25 countries already trust Wultra's technology to secure their digital banking systems. Its clients include major banking groups and payment providers such as Raiffeisen Bank International and Global Payments. Moreover, the solution meets the strict requirements of upcoming directives, such as PSD3/PSR1 and eIDAS 2.0, while guarding against emerging cyber threats.

The potential of East Asia's market is yet to be fully unlocked. *"Across the region, countries are taking different approaches to digital authentication. However, regulators, governments, and businesses alike are clearly moving toward more advanced and secure solutions. With our new branch in Singapore, Wultra is strengthening its local presence to support these diverse markets and help them transition to stronger, post-quantum-ready authentication."* said **Dvorak from Wultra.** The latest report from Gartner identified post-quantum cryptography as one of the key security trends for the year ahead, which confirms that Wultra's focus on PQA and the gradual phasing out of SMS-based authentication is the right strategic direction.

About Wultra

Wultra delivers seamless, post-quantum-ready authentication for banks and fintech companies, enhancing security and simplifying the transition to future standards. Powered by quantum-resistant cryptography, the platform delivers top-tier protection, a developer-friendly interface, and a passwordless user experience – all fully aligned with global regulations. Financial institutions in over 25 countries worldwide trust Wultra's solution. The system meets the strict requirements of upcoming directives such as PSD3/PSR1 and eIDAS 2.0, while offering superior protection against emerging cyber threats.
