

## **[Whitepaper] Partior Publishes Whitepaper on Transforming Global Financial Market Infrastructure**

Today, [Partior](#), the global unified ledger market infrastructure for clearing and settlement, released its ***Transforming Financial Market Infrastructure*** whitepaper, outlining its approach to addressing challenges inherent in the current payment infrastructure, and redefining cross-border money movements as we know it.

Founded in 2021, Partior is fast becoming the network of choice for global financial institutions including **J.P Morgan, Temasek, DBS and Standard Chartered Bank.**

To address the inefficiencies experienced in global value exchange and to accelerate the advent of programmable payments, Partior's whitepaper dives deep into pertinent industry topics:

- **The Current Currency Conundrum:** Examining the current state of messaging-based market infrastructures and the prevalent challenges in wholesale cross-border payments regarding cost, speed, transparency, and inclusive access;
- **The Advent of a Unified Ledger:** Unpacking the inner workings and advantages of the innovation, backed by distributed ledger technology for payment platform fortification and expansion;
- **Use Case Deep Dive:** Exploring the various applications of a unified ledger — from global clearing and FX settlements to liquidity marketplace optimisation and corporate digital accounting.

Partior will also be hosting discussions around key themes of the whitepaper at the upcoming [Singapore FinTech Festival 2023](#) from 15 – 17 November 2023. The Partior booth is located within the Temasek booth in Hall 2, and we look forward to meeting you there.

### **About Partior**

Partior, the global unified ledger market infrastructure for clearing and settlement, is redefining the way money moves globally by optimising how liquidity is accessed. Founded in 2021, Partior is an independent company that grew from the Project Ubin collaboration backed by the Monetary Authority of Singapore. Its shareholders include DBS, J.P. Morgan, Standard Chartered and Temasek.

By building on the inherent features of its global unified ledger and atomic settlement capabilities, Partior is addressing the operating inefficiencies experienced by industry players in global value exchange, including settlement delays, limited transaction transparency and high operating costs, and facilitating the movement of liquidity for financial institutions and their customers.

Its network interoperates with both digital and non-digital asset and currency networks to provide a comprehensive suite of real-time, cross-border multi-currency payments, Payments versus Payments (PvP), Delivery versus Payments (DvP) settlements and trade finance functions.
